

## SAI PLATFORM RESPONSIBILITY TAKING POLICY

KALL Ingredients Kft. undertakes to operate in accordance with the aspects of SAI Platform and ISCC EU and ISCC Plus.

Our company is committed to the pursuit of sustainable agriculture, which in addition to the pursuit of global food security has a positive impact on the environment and society.

The supply of agricultural raw materials is greatly influenced by the following factors, to which our company pays special attention:

- Water is one of the most important natural resources in the world, playing a central role in the life of our company, as our operation is based on the corn wet-milling technology. With our efficient water management technology, we strive to conserve this valuable resource.
- The extent of global warming is significantly affected by the level of greenhouse gas emissions, so we place great emphasis on compliance with the legal requirements and on increased control.
- It is vital for us that our raw material suppliers work with sustainable land use practices to ensure that the soil is maintained in a healthy state.
- Pest management is essential to ensure the quality and sustainability of agricultural yields. Our company ensures the application of appropriate pest control practices, which is based not only on the responsible use of agrochemical products, but also on our integrated pest control strategy.
- In order to protect biodiversity (biodiversity), we manufacture our products exclusively from GMO-free maize and certifies that they are GMO-free. Maize is sourced exclusively from producers who have been assessed as compliant by the SAI Platform and are at least SILVER certified. At the same time, it is in our common interest that our partners achieve GOLD certification over time, and we strive to promote this goal through informative and training materials, as well as continuous consultation.
- We expand the knowledge of our employees with trainings on sustainability, environmental protection and agricultural management.
- Our company ensures the appropriate quality of the products by applying strict food safety regulations. In line with our commitment, our quality and food safety management system is certified to ISO 9001, ISO 22000, BRC, IFS, HALAL, KOSHER and EFISC standards.

Our company has a SAI platform team. Through the cooperation of the members, we have compiled and are constantly reviewing the sustainability plan of our Company, which is available to our employees and partners.
